

### DATASHEET

# **SQ-SEN-6XX**

### ON/OFF TILT SENSOR

# **FUNCTION**

- On / off tilt sensing
- Normally open when vertical
- Normally closed when below or between the switch angles
- Non-sensitive to vibration or lateral movement when open

### APPLICATIONS

- Motion triggered wake-up
- GPS tracking, RFID, vehicle electronics
- Security, anti-tamper, anti-theft, alarms

# DESCRIPTION

The SQ-SEN-6xx series acts like a position sensitive switch that is normally open when vertical and normally closed below or between the switch angles. The 6xx series is designed to be non-sensitive to vibration or lateral movement when vertical. When at rest in a vertical position, the sensor will settle in an open state. When tipped down from vertical to the "switch angle" it will produce continuous on/off contact closures while in motion. When at rest below or between the switch angles, it will settle normally closed.

The sensor can be used to produce CMOS or TTL pulses to interrupt (wake up) a microcontroller. Alternatively, these pulses can be counted to estimate the amount and duration of activity. The sensor is fully passive, requires no signal conditioning, and operates with currents as low as 50 nA.

### **PATENTS**

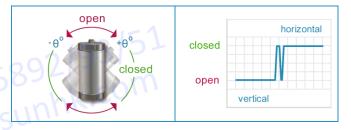

US 7326866, 7067748, 7326867, 7421793. Patents pending.

## **FEATURES**

- Simple Interface No signal conditioning required
- Surface Mount RoHS & REACH compliant, lead-free, Halogen free
- Made in USA fully automated production, 100% testing, worldwide quality and price leader
- **Zero-power Normally -** < 50 nA when activated
- Activation Angle Available in 60°, 75°, 45°, or 45° bidirectional
- Miniature Size 3.3 mm x 6.9 mm
- Industrial Rated 10 year life, -40° to 85° C

### ON/OFF TILT SENSOR

# THEORY OF OPERATION

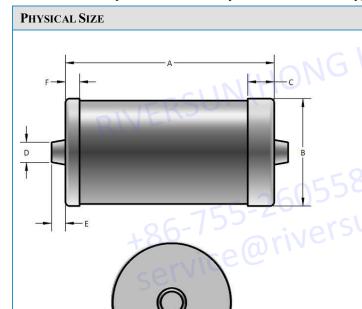

The SQ-SEN-6xx series sensor acts like a position sensitive switch which is open or closed depending on orientation. When resting in a normally open orientation contacts are virtually guaranteed to be open. When resting in the normally closed orientation contacts are not guaranteed to be closed. A good rule of thumb is that they will be closed 95% - 99% of the time when at rest.

When in a normally closed orientation vibration will cause the sensor to chatter open and closed. The engineer should design his or her software to look for high-to-low and low-to-high edge transitions rather than an open or closed switch state.

# **ELECTRICAL CHARACTERISTICS**

| PARAMETER            | Min          | Max   |
|----------------------|--------------|-------|
| Supply Voltage Range | 0.5 V        | 12 V  |
| Current Sink*        | 50 (0.05 μΑ) | 10 mA |

<sup>\*</sup> Current consumption is determined by the resistance of the application circuit and the supply voltage

**ON/OFF TILT SENSOR** 

# LIMITATIONS AND WARNINGS

This product is not designed for use in life support and/or safety equipment where malfunction of the product can reasonably be expected to result in personal injury or death. Buyer uses this product in such applications at Buyer's own risk and agrees to defend, indemnify, and hold harmless SignalQuest, Inc. from any and all damages, claims, suits, or expenses resulting from such misuse.

# **TESTING**

The performance of each sensor is verified through build-time testing.

## System Integration Testing

Thorough testing should be carried out prior to product release to ensure system integration has not introduced unforeseen problems. The system integrator assumes the ultimate responsibility for the safety of the target application.

# **NOTICE**

Information furnished by SignalQuest, Inc is believed to be accurate and reliable. However, this document may contain ERRORS and OMMISIONS. Accordingly, the design engineer should use this document as a reference rather than a strict design guideline and should perform thorough testing of any product that incorporates this or any other SignalQuest product. No responsibility is assumed by SignalQuest, Inc. for this use of this information, nor for any infringements of patents or other rights of third parties that may result from its use. Specifications are subject to change without notice. No license is granted by implication or otherwise under any patent or patent rights of SignalQuest, Inc.
